Context

One of your new year's resolutions was to become a data scientist, and so you dive in with a learning-by-doing mindset. The first thing on your agenda: to find a problem to solve and data that can help solve it!

Tasks/instructions

Write a problem statement of 300-500 words for your individual project. The statement should include three sections:

> **Context**. What is the topic of your project and why is it important?

> **Objective.** What is the goal of the project? What dataset(s) are you going to use? What period will you consider? Note: this section should be very short 1-5 sentences.

> **Research questions.** What are the specific research questions that you will seek to answer in your project?
